

**Tomorrow's  
Manufacturing  
Innovations,  
Today**

## 1. THE HISTORY OF MICRO

# Micro is Built on precision, reliability and problem solving

For 50+ Years, we have proven ourselves a capable and reliable manufacturing partner in industries with the highest requirements of precision. As we've paved the way for solutions to problems previously unsolved, we've found ourselves searching wide to integrate novel technology and new processes. In many circumstances where there has never been a way prior, we've created world-firsts.

**That culture and dedication to solve any problem remains at the heart of our company, and we've used it to formalize the development of our innovation solutions arm; MicroLabs.**

## 2. WHY MICROLABS?

# MicroLabs is preempting the challenges of tomorrow

**We recognize the role that innovation will play in manufacturing for the future, and for you to stay competitive, profitable and precise, improvement is an inevitability.**

At Micro, we want to explore what the innovation spectrum can look like for your next platform, and that's why we've developed the MicroLabs process. It is a technology agnostic engine designed to rapidly provide you answers and options from incremental to exponential breakthroughs to accelerate your engineering process well past the competition.

### 3. WHAT THIS MEANS FOR YOU

## Your future competitiveness is directly correlated to your innovation appetite

Your need to stay competitive is directly correlated to your need to engage innovative manufacturing. MicroLabs gives your team access to design thinking, software automation, and forward thinking manufacturing that many departments aren't structured to staff and deploy internally.

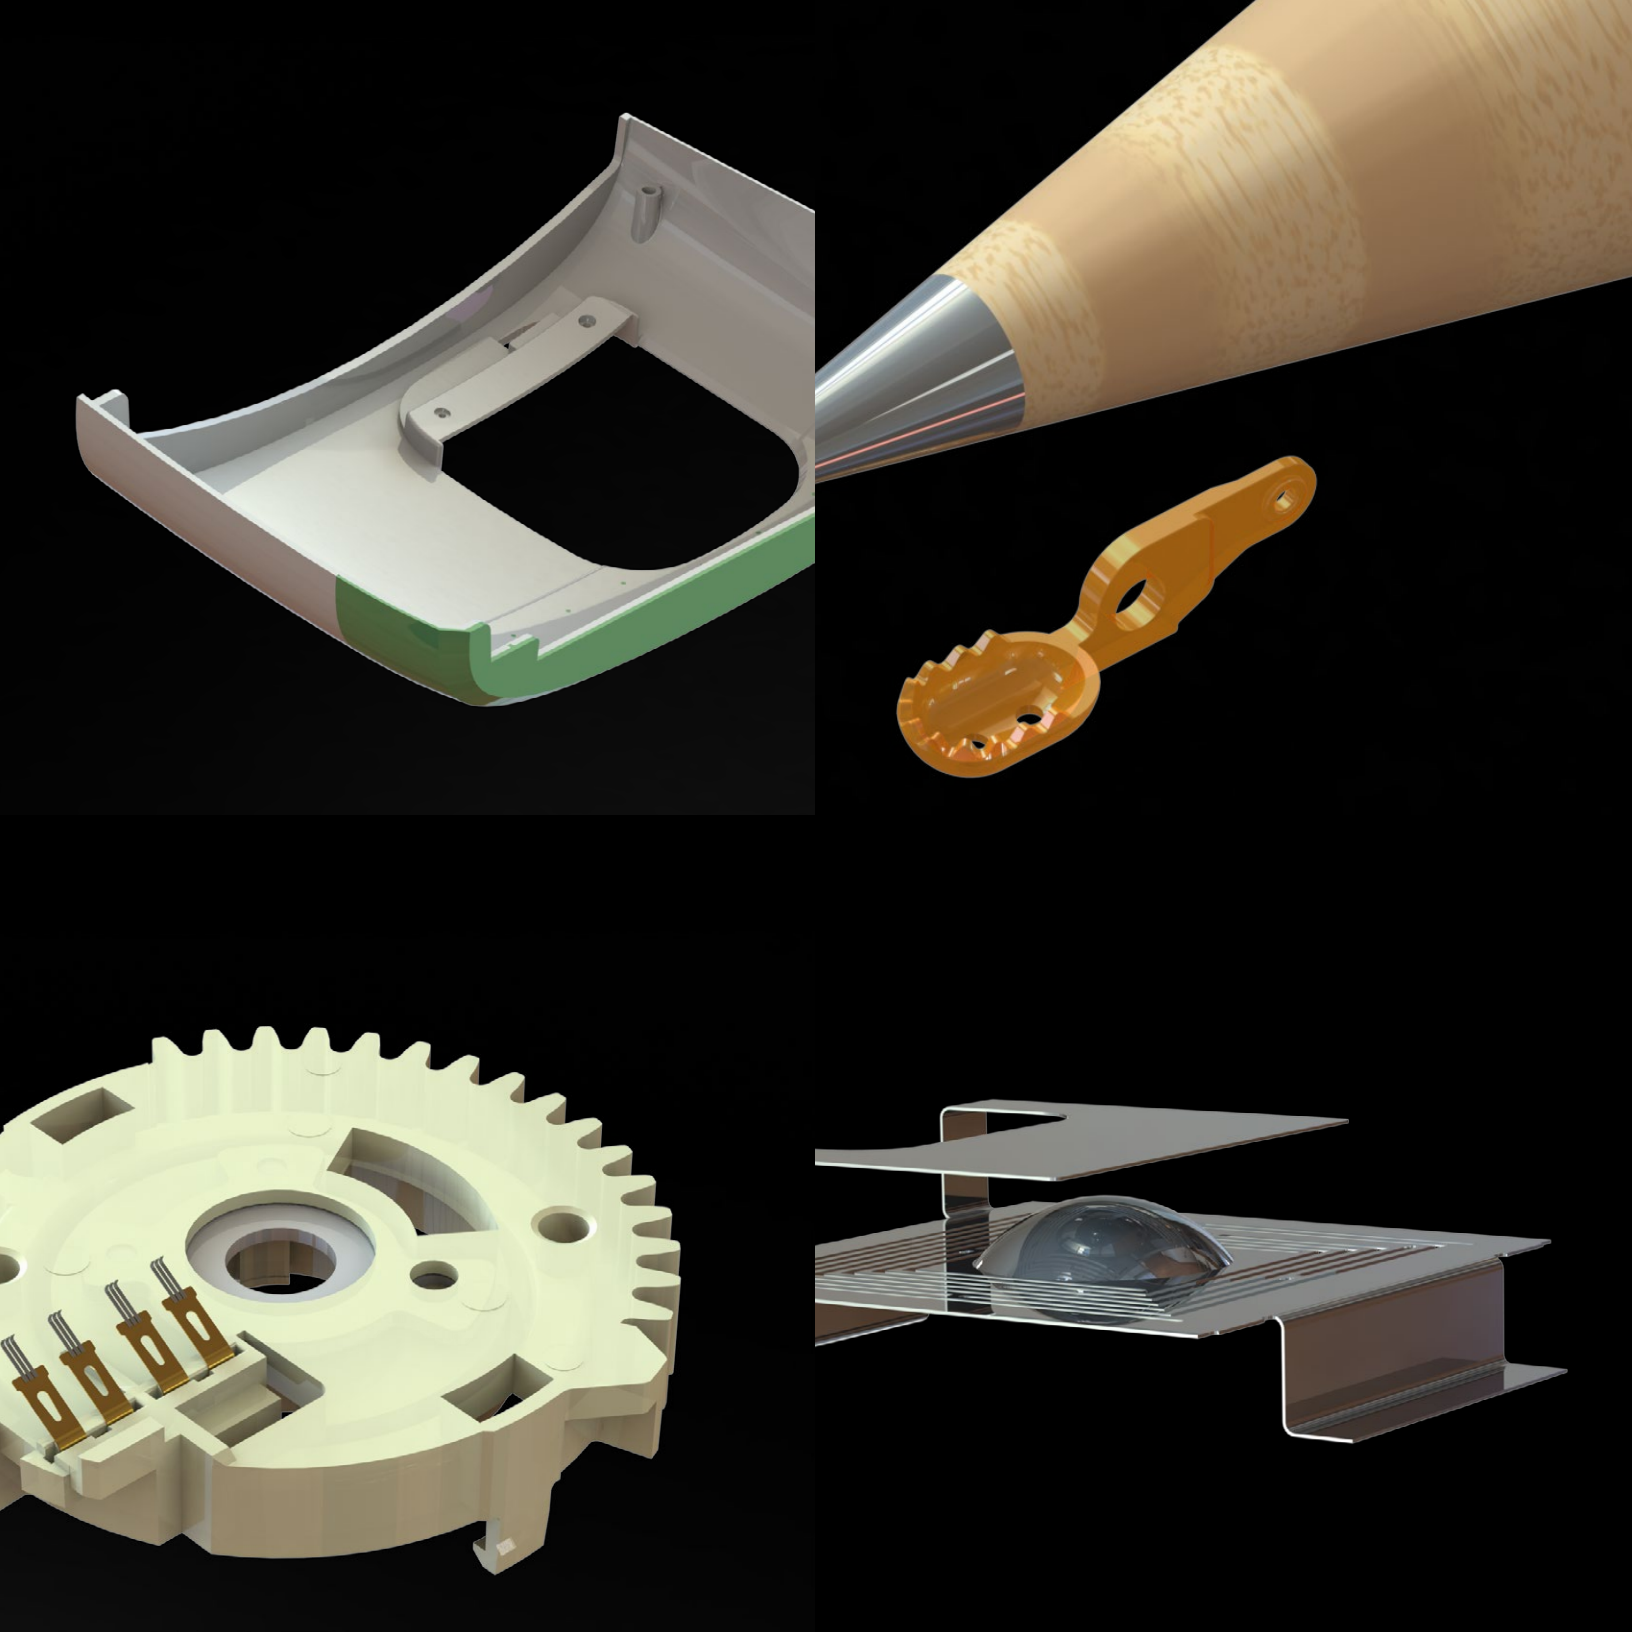

Instead of draining your resources, we offer the opportunity to access our unique ecosystem of design and decide the path forward based on options and hard data.

66

We offer you the opportunity to bring your design challenges to us, regardless of how big or small. Our guarantee is simple: 5-10 viable design solutions for your consideration in less than 10 days and 3-5 fully costed and ready for release proposals in less than 30 days.

Michael Tucci,  
CEO and President

#### 4. WHY IT WORKS

## Our proven manufacturing capability ensures MicroLabs ideas come with parts

As a company built on the success and history of our manufacturing arm, MicroTech, Micro is uniquely positioned to provide the precise viability on every design solution we provide, vetted and ready to release.

Our work with life-critical applications in automotive, medical device, and aerospace also provides a certainty of our work that you won't find elsewhere. The result for you is a trusted set of options that actually be validated, tooled (if needed), and scaled into production.

MicroLabs is measured in breakthroughs and we commit ourselves to helping you take leaps forward on the innovation spectrum.

# S.M.A.R.T.E.R MANUFACTURING
